## PATIENT INSTRUCTIONS – MYELOGRAM

**Patient Name:** \_\_\_\_\_ **Date of Procedure:** \_\_\_\_\_

**Time of Procedure:** \_\_\_\_\_ **Location of Procedure:** \_\_\_\_\_

### What does this test show?

A myelogram is used to examine the spinal canal and spinal cord. A special contrast media (dye) that shows up on x-rays to indicate any abnormalities is placed into the spinal canal. The myelogram may be done to determine the cause of pressure on the spinal cord or spinal nerves. The contrast used during a myelogram outlines the spinal cord and nerve roots. This helps your doctor determine if there are any unusual indentations or abnormal shapes in the spinal cord. Anything that is pushing into the nerves shows up as an indentation into the spinal sac. This indentation could be from a herniated or bulging disc, a tumor, or an injury to the spinal nerve roots.

### What will happen during the procedure?

A local anesthetic is injected into the lower back. Using a sterile technique, the doctor places a needle into the spinal canal. Contrast media is injected into the spinal canal. This contrast media mixes with the spinal fluid so that it will show up on x-rays. You will be asked to lie on a tilting table while multiple x-rays are taken to show the flow of the dye through the spinal canal. The myelogram is usually combined with a CT scan to get a better view of the spine in cross section and to check the health of the bones and nerves.

### How do I prepare for the examination?

- You should avoid alcohol for 48 hours prior to your test.
- You will need to bring someone who can drive you home after your test. You should not drive yourself home.
- Please see the attached list of medications. If you take any of these medications, please refrain from taking them for 48 hours prior to and 24 hours after your test. If you have any concerns about not taking these medications, please contact your physician.
- Your Physician will order lab work for you 1-2 days prior to your test.

### After the examination

- You should have someone drive you home.
- You should drink plenty of water for the next 24 hours.
- You will need to lay flat for 2-3 hours following your test.
- Avoid strenuous activity for at least 24 hours after your test.

## MYELOGRAMS: WHICH MEDICATIONS SHOULD YOU HOLD?

---

According to the article "Guide to Medications To Be Withheld Prior To Myelograms" in the fall 1999 issue of Images, it is necessary to screen patients scheduled for myelograms prior to appointment. It recommends that drugs that lower the seizure threshold, especially phenothiazine derivatives, be withheld for at least 48 hours before and 24 hours post procedure. Other medications to be withheld include MAO inhibitors, tri-cyclic antidepressants, CNS stimulants, and psychoactive drugs like analeptics and major tranquilizers. Patients are to have the following labs drawn 1-2 days prior to exam; PT, PTT, INR, and Platelet.

### CNS Stimulants

Generic Name	Trade Name
Ammonia .....	Aromatic spirit
Amphetamine.....	Benzedrine, Adderall
Benzphetamine .....	Didrex
Caffeine	
Dextroamphetamine .....	Dexedrine, Dextrostat
Diethylpropion.....	Tepanil, Tenuate
Doxapram .....	Dopram
Mazindol .....	Sanorex, Mazanor
Methamphetamine .....	Methedrine, Desoxyn
Methylphenidate .....	Ritalin, Methylin
Modafinil.....	Provigil
Pemoline.....	Cylert, Phenylisohydantoin
Phendimetrazine .....	Plegine, Strychnine
Phenmetrazine .....	Preludin, Picrotoxin
Phentermine.....	Lonamin

### Antidepressants

Amitriptyline.....	Elavil, Endep
Amoxapine .....	Asendin
Bupropion .....	Wellbutrin, Zyban
Chlordiazepoxide .....	Limbitrol
Clomipramine .....	Anafranil
Cyclobenzaprine .....	Flexeril
Desipramine .....	Norpramin, Pertofrane
Imipramine .....	Tofranil
Loxapin.....	Loxitane
Maprotiline .....	Ludiomil
Mirtazapine.....	Remeron
Nefazodone .....	Serzone
Nortriptyline .....	Aventyl, Pamelor
Protriptyline .....	Vivactil, Triptil
Trazodone .....	Desyrel
Trimipramine .....	Surmontil
Venlafaxine .....	Effexor

*continued*

# MYELOGRAMS: WHICH MEDICATIONS SHOULD YOU HOLD?

---

## **Antipsychotics/Major Tranquilizers**

Generic Name	Trade Name
Chlopromazine.....	Thorazine
Chlorprothixene .....	Taractan
Cozapine.....	Clozaril
Doxepin.....	Sinequan, Zonalon, Adapin
Droperidol.....	Inapsine
Fluphenazine .....	Permitil, Prolixin
Haloperidol .....	Haldol
Lithium carbonate .....	Lithane, Eskalith, Lithobid
Loxapine.....	Loxitane
Meprobamate.....	Equanil, Miltown, Mesprospan
Mesoridazine .....	Serentil
Olanzapine.....	Zyprexa
Perphenazine.....	Trilafon, Phenazine
Pimozide .....	Orap
Promazine.....	Sparine, Prozine
Prochlorperazine.....	Compazine
Risperidone.....	Risperdal
Thioridazine .....	Mellaril
Thiothixene .....	Navane
Trifluoperazine .....	Stelazine
Triflupromazine.....	Vesprin
Quetiapin Fumarate.....	Seroquel

## **Phenothiazine and Combinations**

Methotriimeprazine.....	Levoprome, Nozinan
Molindone Hydrochloride.....	Moban
Perphenazine.....	Trilafon, Phenazine
Perphenazine/Amitriptyline.....	Triavil, Etrafon
Piperacetazine .....	Quide
Promethazine .....	Phenergen
Thiethylperazine .....	Torecan
Thiapro pazate .....	Dartal
Trimeprazine .....	Temaril
Trimethobenzamide .....	Tigan

## **SSRI Selective Serotonin Re-Uptake Inhibitors**

Citalopram .....	Celexa
Fluoxetine .....	Prozac
Fluvoxamine .....	Luvox
Paroxetine.....	Paxil
Sertraline .....	Zoloft

*continued*

## MYELOGRAMS: WHICH MEDICATIONS SHOULD YOU HOLD?

---

### **Monamine Oxidase Inhibitors**

Generic Name	Trade Name
Isocarboxazid .....	Marplan
Phenelzine .....	Nardil
Procarbazine .....	Matulane, Natulan
Selegiline .....	Eldepryl, Carbex
Tranylcypromine .....	Parnate

### **Miscellaneous**

Carisoprodol .....	Soma
Enflurane .....	Ethrane
Hydroxyzine .....	Vistaril
Ketamine .....	Ketalar
Meperidine .....	Demerol
Mathohexital .....	Brevital
Tramadol .....	Ultram
